

# UC-One

## The collaboration app that keeps you connected to everyone and everything

UC-One is a communications and collaboration Software as a Service (SaaS) for calling, messaging, and meeting with anyone, from any device. It includes HD video, voice, messaging, screen sharing, and conferencing in a single easy-to-use cloud application that integrates with other cloud business applications.

UC-One provides a seamless and consistent communications experience on a PC, tablet or smartphone - ideal for organizations of any size with geographically dispersed teams and mobile employees working at the office, at home, or on the go.

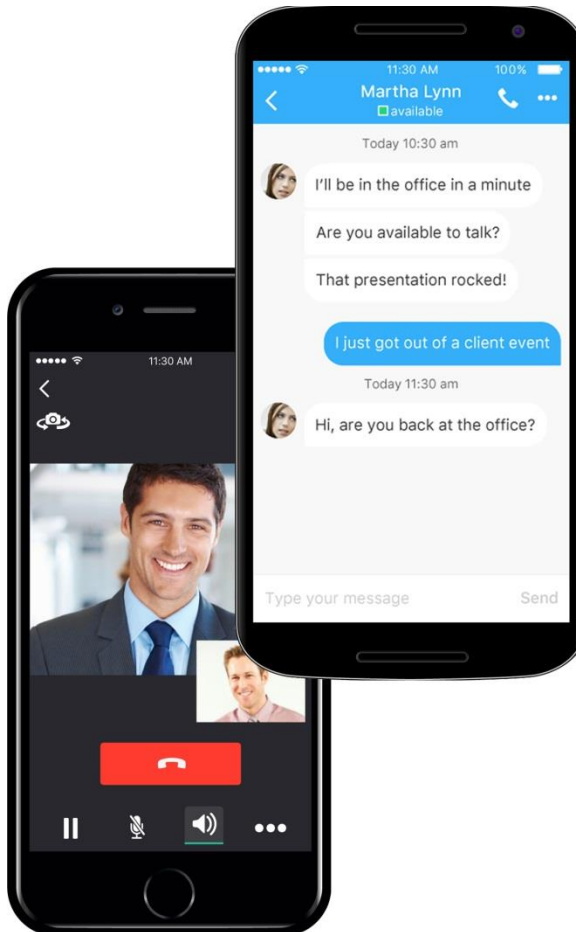

### Key capabilities

UC-One enhances three of the most common scenarios for communicating in the workplace: calling, messaging, and meeting. Here's how it facilitates reliable collaboration among everyone in your company and with people outside your company.

#### Calling

- **HD video** – High definition video and wideband audio codecs help virtual teams build trust when face-to-face meetings aren't possible.
- **Business calling** – From our mobile app you can place and receive business calls using VoIP and the cellular network using your business phone number.
- **Presence status** – UC-One keeps you “in the know” of your colleagues' availability status (available, busy, away, or on the phone), saving you time and eliminating the guesswork out of communicating.
- **One number** – You publish one business phone number and all your business calls will go to the device of your choice: desktop, tablet, or smartphone.
- **Corporate directory** – You can easily access your corporate directory, enabling you to find colleagues within seconds with simple search from any device.
- **Click-to-call from Website** - Use your UC-One phone number to receive calls from your company website and deliver better service to your visitors.
- **Dial into a video conference** - Join a video conference bridge or Webex meeting from UC-One using the SIP URI (Uniform Resource Identifier) for the conference system.

## Messaging

- **1-1 and group chat** – Exchange messages instantly with a colleague or a team and minimize email overload.
- **Chat history** – You'll never lose track of your chats by viewing yesterday, last week, last month, or all your messages, which are synced across all your devices.
- **Offline Mode** – View your messages and listen to your voicemail when you don't have a data network connection, so you can stay productive at all times.
- **Application integration** – While you're chatting, everything you share in common with a colleague or a group, like emails or files from other business applications, is there at your fingertips. UC-One is pre-integrated with Office 365, G-Suite, Salesforce, and other popular applications.

## Meeting

- **Virtual meeting room** – Everyone with UC-One has their own private and secure online meeting space where teams can participate in HD audio, video, messaging, and screen sharing collaboration. Colleagues and guests can easily join without the hassles of dial-in numbers and passcodes.
- **HD video conferencing** – High-definition 1080p at 20fps video increases engagement and minimizes distractions during meetings. Virtual teams can meet as naturally online, as when they're together in the same room.
- **Screen sharing** – Share your entire screen or just a specific app or a document, without additional downloads or separate web collaboration apps. Sharing can be done from your desktop and everyone can view from desktop, tablet, or smartphone. View full screen or zoom in or out for a better viewing.
- **Group chat** – During meetings, desktop and mobile participants can chat with one another to increase meeting effectiveness.
- **Guest collaboration** – Invite external people to join you in a multimedia collaboration session.

79% of knowledge workers work in dispersed teams

They average over 60 meetings per month and 40% of their meetings are online

A meeting that starts five minutes late costs a company 8% of that meeting

## Mobile working

- **Any device** – UC-One works on PC, MACs, and iOS and Android tablets, and smartphones so you can be highly productive from anywhere.
- **One phone, multiple purposes** – UC-One is ideal for using your personal smartphone for business use. It enables you to use your business identity when calling a customer so you maintain a professional image while keeping your mobile number private.
- **VoIP calling** – You can place and receive business calls using VoIP while roaming to avoid high roaming charges.
- **Move calls** – Seamlessly pull your active call from your desktop to your mobile and vice versa, without interruptions or disconnects.
- **VoIP handover** – UC-One automatically keeps your VoIP calls as you move between data networks, such as from Wi-Fi to LTE.
- **Multiple calls** – You can handle two calls at the same time and even merge them into a 3-way conversation.
- **Access to your office** – Our mobile app provides you with easy access to your corporate directory and other business applications, keeping you connected when you're on the go.

80% mobile workers use text messaging for business

59% of employees use mobile devices to run line-of-business applications

70% of mobile professionals conduct their work on personal smart devices

## Business application integration

**Pre-integrated business apps** – UC-One unifies with popular business applications, making it easy to find key information stored in those apps, while streamlining communications and business processes. Pre-integrated apps include Google G Suite, Microsoft Office 365, Outlook, Box, Salesforce, Concur, and Twitter.

**Micro-app views** – Your pre-integrated apps are accessible within the UC-One window, saving you time and minimizing app switching while you're communicating.

**Quick actions** – You can easily view and work with your apps, including emails, calendar events, files, sales opportunities, and even social media postings while you're communicating in UC-One.

- **Emails and calendar events** – Filter Google and Microsoft items for emails and calendar events, and perform functions such as Mark as read, Archive or Delete emails or Accept calendar invites.
- **Files** – Filter drive files from Box, Google, or OneDrive and launch files with one click.
- **Tweets** – Filter Twitter information based on My Tweets, Retweets, and Mentions, and perform functions on a tweet such as Retweet and Like.
- **Sales Accounts** - Filter Salesforce items based on All Accounts or Specific Opportunities, and perform functions on an opportunity such as Add Note and Change Status.
- **Tasks** - Filter Google tasks, and perform functions such as Add a task, Change a task due date, Assign/Re-assign a task, Mark task as complete, Delete, and Edit.

## Content in common

**Unified view** – You can easily find all your files, calls, messages, and colleagues in one place, keeping you focused and minimizing the need to shift your attention away from your conversation.

**Content you've shared** – Everything you've shared with a colleague in the pre-integrated business apps is dynamically displayed while you're communicating, bringing relevance and context to your conversations and removing the chaos of app switching and searching for files.

We switch tasks on our computer **566** times a day

We spend **20%** of our time weekly searching and gathering information

**44%** of workers do not find the information they need to do their jobs

## Why UC-One?

**Improved productivity** – Companies that deploy unified communications experience a 72% increase in business performance.

**Better collaboration** – 91% of IT executives see improved collaboration after UC is implemented.

**Faster problem solving** – 88% of UC buyers reported significantly faster problem resolution.

---
